

POLYURETHANE CHEMIST POSITION

Australian Urethane Systems Pty Ltd is seeking a Polyurethane Chemist for our Sydney operation. Preferably the candidates should have a minimum 3-5 years experience in the testing and formulation of polyurethane systems.

The position is a hands-on role in both systems development and quality control and will be located in our laboratories at Kings Park and Seven Hills in Western Sydney, Australia.

DUTIES AND RESPONSIBILITIES

- Develop formulations for rigid, semi rigid and flexible polyurethane foam applications and technologies.
- Review and develop formulations as required over a wide range of spray and pour polyurethane foam systems to meet specific market requirements.
- Develop effective communications with raw material suppliers technical staff
- Use independent judgment and interpretation to research and apply external information sources together with your existing expertise to meet identified product design and application, and development objectives.
- Evaluate raw materials for standard product and potential new applications.
- Prepare and present product development reports as required.
- Research and develop products based on environmentally-friendly technologies particularly utilising ecomate blowing agent
- Assess and present reports on the feasibility of new and emerging polyurethane foam technologies to the sales organisation.
- Collaborate with the Customer Service / Sales staff to achieve effective customer outcomes.
- Provide technical training and support for the operations and sales functions
- Assist with resolving technical issues with customers (travel to customers as necessary).
- Prepare / review MSDS and product technical literature

QUALIFICATIONS

A minimum of a Bachelor degree in Science or Chemistry is required. Higher qualifications will be reviewed favourably. Good computer and communication skills both written and oral are essential.
